

1 RQ1b: Corrector Experiments

1.1 Ground Truth Correctness: Baseline Results

Table 1: Corrector Performance on Ground Truth Data Using Correctness-Based Validation

Model	F1 $\uparrow$	Precision	Recall	Judge F1 $\uparrow$	Total Edges	Revised Edges	Change Rate
Social Norms	0.44 ± 0	0.53 ± 0	0.40 ± 0.01	0.48 ± 0	64 ± 0	2.3 ± 1	0.9 ± 0
Depressive	0.36 ± 0.03	0.45 ± 0.04	0.30 ± 0.05	0.34 ± 0.02	94.7 ± 1.5	30.3 ± 3	9.6 ± 1
Emergency Department	0.41 ± 0.02	0.49 ± 0.02	0.36 ± 0.04	0.42 ± 0	212.3 ± 2.1	24.3 ± 4	2.3 ± 0
Aggregate (n=3 CLDs)	0.39 ± 0.03	0.48 ± 0.03	0.34 ± 0.05	0.40 ± 0.07	123.7 ± 74	19.0 ± 13.9	4.3 ± 4.4

Note. Results show corrector performance using correctness-based evaluation (1 run per CLD, 3 total). F1 = harmonic mean of precision and recall; Judge F1 = pre-correction judge performance; Total Edges = number of edges in corrected CLD; Revised Edges = number of edges modified by corrector; Change Rate = percentage of edges revised. Values presented as mean $\pm$ SD across CLDs. $\uparrow$ indicates higher is better.

1.2 Synthetic Corruption Correctness Results

Table 2: Corrector Performance on Synthetically Corrupted Data (Baseline Prompt)

CLD	F1 $\uparrow$	Precision	Recall	Judge F1 $\uparrow$	Edges Retained	Revised Edges	Change Rate
Social Norms	0.383	0.273	0.643	0.146	33	9	21.4%
Depressive	0.556	0.500	0.625	0.240	90	23	20.4%
Emergency Department	0.550	0.408	0.841	0.241	272	177	39.4%
Aggregate (n=3 CLDs)	0.538	0.418	0.757	0.221	395	209	34.6%

Note. Results show corrector performance on synthetically corrupted data (30% corruption rate). F1 = harmonic mean of precision and recall for recovering base CLD edges; Judge F1 = pre-correction judge performance; Edges Retained = edges kept after correction; Revised Edges = edges modified or removed; Change Rate = percentage of corrupted edges changed. Aggregates computed across 3 CLDs (Social Norms, Depressive, Emergency Department). $\uparrow$ indicates higher is better.
